Top ~~Six~~ Seven Tips for Designing with Xpressions SNAP! SHEER

1. All SHEER pre-designed configurations utilize SHEER on the front plane and standard Xpressions® Fabric Graphic Skins on the back plane of the frame. The effect is more pronounced in this format.
   Of course if your display is viewed from both sides of the frame SHEER on front and back planes can be a striking visual space definer.

2. Dark colors within the graphic design show the translucent effect off best.

3. SHEER graphics look their best against like colors. Layer colors as you would with paints and create effects of mixed visual hues like orange from yellow and red.

4. White text and images on SHEER skins will appear to float in front of back plane standard Xpressions® skins when both SHEER and standard skins share the same or similar dark color or imagery.

5. Use SHEER skins as an accent in your next custom design by incorporating a few SHEER skins to your display. Sometimes the best Xpressions® displays are all solid colors.

6. A great tool for sales to drive repeat graphics or new graphics for every day of your clients show - Not a design tip, but if you're a designer, what's wrong with a little job security?

7. All rules are meant to be broken - Experiment and see what your creative team comes up with, SHEER is so new on Xpressions® you will be sure to get notice.
